NATHAN BLAGA

PERSONAL PROFILE

- A creative, driven and passionate software developer.
- Currently studying at Coder Academy Sydney.
- Whilst studying, I have been exposed to various technologies, frameworks, tools and methodologies.
- Prior to this, I had worked within the Accounting and Finance sector.
- I also worked within the retail and sales industry for over twelve years.
- I am determined to build a strong network of like-minded developers who wish to improve and grow within the industry.

PROJECTS

Get Lucky 3000

HTML | CSS | JavaScript | Trello | GitHub

Live Demo: <https://getlucky3000.netlify.app/>

- Coder Academy hackathon Project.
- Developed a web application that generated a dating profile based on the information provided by the user.
- Working within a team challenged my communication skills and required a professional approach to the team's source control practices.
- Utilising several APIs within the project also posed challenging obstacles which we were required to overcome.

Workout Jungle

Rails | PostgreSQL | Bootstrap | Heroku | Cloudinary | Trello | Balsamiq

Live Demo: <https://workout-jungle.herokuapp.com/>

- Two-sided marketplace in which Australian consumers can buy and sell new and used fitness equipment.
- Approached with an agile development mindset.
- I utilised feature sprints and implemented continuous deployment with the aid of development and production pipelines.
- The database for Workout Jungle's user base and their listings provided an interesting yet challenging experience.

Zop - Quiz Game

Ruby | Trello | GitHub

Source Code: https://github.com/NJBLAGA/Zop_Quiz_Game

- Terminal based quiz game built completely using Ruby.
- Prompts a player with a series of random questions ranging in difficulty.
- It also tracks their current score and remaining attempts.
- This project challenged me to focus on test driven development and error handling.
